

General Specification of Installation

Play units for use in areas such as yours have to be manufactured, installed and maintained in accordance with specific requirements laid down by European Standard BSEN1176 (General Safety Requirements) and BSEN1177 (Impact Absorbing Surface).

Once the unit has been installed, conforming to these regulations, we strongly endorse the frequent inspection and maintenance of all equipment including an annual safety check. Following completion of the installation, leaflets covering design, manufacture and installation guidelines on inspection, with easy to use record forms, will be passed on to you.

All of our products are manufactured under the ISO9002 Quality Assurance system.

In the case of the project falling within the Construction Industry Scheme, we need to be notified prior to any work commencing. Plane & Simple Ltd has the correct authority to work within such a scheme.

Specification of Materials Used

All timber to be pressure treated with Tanalith E environmentally friendly treatment which is EEC recommended for use in children's playgrounds.

All timber to be planed surface.

Myprex membrane weed suppresser to be used when quotation includes a play bark under surface.

All timber upright supports will be fully excavated and concreted in place.

CRB checks

Plane and Simple has a policy of checking all members of staff with the Criminal Records Bureau with regard to working in locations where children may be present.
